Financial Resilience of Taiwan's Banking Sector

Taiwan adopts financial supervisory measures in step with international practices and those measures have been effective in strengthening the financial resilience of our banking sector and supporting real economic growth.

After the 2008 financial crisis, the Basel Committee on Banking Supervision (BCBS), Financial Stability Board (FSB) and other international bodies have proposed series of reforms to improve banking sector's ability to absorb shocks from economic and financial impact, strengthen its financial resilience and promote stability in the financial markets. In line with the international standards, the FSC has also adopted some important measures since the crisis as presented below:

1. Capital adequacy:

- (1)To make sure domestic banks measure up to Basel III capital requirements in both quality and quantity, the FSC has been raising the minimum requirements for capital adequacy ratios every year since 2013. Starting from 2019, the minimum requirements for common equity tier 1 ratio, tier 1 capital ratio and total capital adequacy ratio will be 7%, 8.5% and 10.5% respectively.
- (2)To improve the loss-absorbing capacity of systemically important banks, the FSC request domestic systemically important banks to meet 2% additional regulatory capital requirements and 2% additional internal capital requirements with Common Equity Tier 1 Capital only. These additional capital requirements must be achieved before the end of each of the four years equally starting from the next year after the designated date.
- (3)To enhance the robustness and risk sensitivity of the calculation for risk-weighted assets (RWA), the FSC has amended regulations regarding RWA calculations according to the "Basel III: Finalizing Post-Crisis Reforms" released by BCBS. The revised rules for the standardized approach for credit risk, the internal ratings-based approach for credit risk, output floor, operational risk, and leverage ratio have been implemented since January 1, 2025, while changes in market risk, credit valuation adjustment, and securitization exposures took effect on July 1, 2025.
- 2. Leverage ratio: To improve inconsistency in the application of risk weights for calculating capital charge and to supplement the aforementioned risk-based capital requirements, the FSC, in reference to BCBS recommendations, requires that starting 2018, the leverage ratio (tier 1 capital/total exposures) of banks shall not be less than 3%.

- 3. Liquidity coverage ratio (LCR): To enhance the ability of banks to restore short-term liquidity, the FSC and the Central Bank have implemented liquidity coverage ratio since 2015 and require that the LCR (high-quality liquid assets / total net cash outflows over the next 30 calendar days) of banks shall not be less than 100% starting 2019.
- 4. Net stable funding ratio (NSFR): To make sure banks hold sufficient long-term stable funds to support their business development, the FSC, in consultation with the Central Bank, had promulgated the requirement for NSFR (available stable funding/required stable funding) in reference to the BCBS recommendation, and implemented the ratio in 2018 in line with the international practice.

As of the end of Q2 2025, the average common equity tier 1 ratio, tier 1 capital ratio and total capital adequacy ratio of domestic banks have reached 12.36%, 13.57% and 15.65% respectively, all higher than the minimum requirements. In addition, the 2025 stress test results show that the average capital adequacy ratios and leverage ratio of domestic banks under stress scenarios are higher than the minimum requirements, indicating Taiwan's banking sector has developed considerable financial resilience.

To strengthen the risk bearing capacity and international competitiveness of domestic banks, the FSC will continue to watch the international trends in financial supervision reforms and changes in global economic and financial situations, and adopt relevant measures in reference to the international practices:

- 1. Continue to conduct stress tests: The FSC will, in line with changes in domestic and international economic and financial situations, establish stress scenarios for specific risks or total position and conduct stress tests in a timely manner to grasp the risk bearing capacity of banks under adverse conditions.
- 2. Implement countercyclical capital buffer (CCyB) when necessary: The FSC has established regulations authorizing the implementation of CCyB, but has not implemented the requirements in consideration that the measures adopted in recent years for increase in provision for bad debts have produced the similar effect of capital increase during credit growth. However the FSC will consider adopting CCyB measures in the future in reference to international practices.

Below is a table comparing the financial resilience measures recommended by international organizations and adoption of those measures in Taiwan.

Annex

Financial resilience measures recommended by international organizations and adoption of those measures in Taiwan

| adoption of those measures in Taiwan | | |
|--------------------------------------|---------------------------------------|--|
| Financial res | silience measures recommended by | Adoption in Taiwan |
| int | ternational organizations | |
| Capital | BCBS released Basel III in December | The FSC has amended the |
| adequacy | 2010, which calls for increase in | Regulations Governing the Capital |
| | minimum capital adequacy | Adequacy and Capital Category of |
| | requirements every year and | Banks in November 2012 and |

| | starting 2013. | regulations in step with |
| | | international practices. |
| | Bail-in mechanism: BCBS issued | The aforementioned Regulations |
| | another document in January 2011 | has set forth the manner by which |
| | requiring banks to convert tier 1 and | banks are required to use capital |
| | tier 2 capital instruments other than | instruments other than common |
| | common stocks issued by the bank to | stocks to absorb loss by stipulating |
| | common stocks or write off the debts | that "The priority order for the |
| | when certain trigger conditions are | distribution of the earnings and |
| | met to address the issue of loss | assets of the holder of additional |
| | absorbency. | Tier 1 or Tier 2 capital is the same |
| | | as that of a common stock holder |
| | | when the competent authority |
| | | assigned officials to take |
| | | receivership over the bank, order |
| | | such a bank to suspend and wind up |
| | | business, or liquidate the bank", |
| | | which already has the "bail-in" |
| | | effect. |
| | BCBS released "Basel III post-crisis | The FSC has amended the |
| | regulatory reforms" in December | "Methods for Calculating Bank's |
| | 2017, effective on 1 January, 2023. | Regulatory Capital and |
| | | Risk-Weighted Assets." The rules |
| | | concerning the standardized |
| | | approach for credit risk, the internal |

| | | ratings-based approach for credit |
|------------------|--------------------------------------|---------------------------------------|
| | | risk, output floor, operational risk, |
| | | and leverage ratio have been |
| | | implemented since January 1. |
| | | Meanwhile, the rules for market |
| | | risk, credit valuation adjustment, |
| | | and securitization exposures took |
| | | effect on July 1, 2025. |
| Leverage ratio | BCBS issued the leverage ratio | The FSC has amended relevant |
| | framework and disclosure | regulations in December 2014 and |
| | requirements in January 2014, which | implemented the amended |
| | revised the method for calculating | regulations in step with |
| | leverage ratio and disclosure | international practices. |
| | requirements and will be implemented | |
| | in 2018. | |
| Quantitative | Liquidity coverage ratio (LCR): BCBS | The FSC and the Central Bank |
| liquidity | issued the LCR requirements in | jointly promulgated the Standards |
| indicators | January 2013, which finalize the | Implementing the Liquidity |
| | methodology for LCR calculation and | Coverage Ratio of Banks in |
| | are implemented in 2015. | December 2014, which is |
| | | implemented in step with |
| | | international practices. |
| | Net stable funding ratio (NSFR): | The FSC and the Central bank |
| | BSBC released the NSFR document in | jointly promulgated the Standards |
| | October 2014, which finalizes the | Implementing the Net stable |
| | methodology for NSFR calculation | funding ratio of Banks in December |
| | and will be implemented in 2018. | 2016, which is implemented in step |
| | | with international practices. |
| The third pillar | BCBS released the Revised Pillar 3 | The FSC has amended the |
| | Disclosure Requirements in March | Regulations Governing the |
| | 1 | |
| | 2017 and set the date of | Disclosure of the Relevant |
| | - | |
| | 2017 and set the date of | Disclosure of the Relevant |

| | | amended regulations in line with |
|-----------------|--|--|
| | | international practices. |
| Countercyclical | BCBS released the CCyB guidance for | The Regulations Governing the |
| capital buffer | the reference of regulators in setting | Capital Adequacy and Capital |
| (CCyB) | their CCyB level in December 2010. | Category of Banks contain |
| | | provisions authorizing the |
| | | implementation of CCyB. However |
| | | CCyB has not been implemented in |
| | | consideration of the following |
| | | reasons: |
| | | Taiwan has been increasing the |
| | | amount of provision for bad debts |
| | | by banks. For instance, the |
| | | provision ratio for exposures in |
| | | Mainland China and for real estate |
| | | loan assets has been raised to 1.5%, |
| | | which has the countercyclical |
| | | buffer effect. Also it is questionable |
| | | whether increased CCyB can be |
| | | smoothly released to absorb loss |
| | | when the credit cycle is reversed. |
| | | Thus the FSC will evaluate the |
| | | matter further and continue to |
| | | watch the development in other |
| | | countries at the present time. |
| Global | 1. FSB issued in November 2015 the | 1. Taiwan has not have G-SIBs |
| systemically | total loss absorbing capacity | and hence needs not adopt the |
| important | (TLAC) standard for globally | FSB rules. As for the finalized |
| banks (G-SIBs) | systemically important banks | documents BCBS had released, |
| | (G-SIBs) to measure whether those | the FSC will look into related |
| | banks have sufficient capital buffer | matters and implement new |
